METHOD AND STRUCTURE TO ANALYZE WEB CLIENT DIALOGS

ABSTRACT

A method (and structure) of capturing dialog on a computer network

5   includes, based on an initial access request to a first network node, establishing

contact with an intermediary node so that a subsequent dialog is directed through

the intermediary node. A request inbound to the first network node is directed to

the intermediary node. A response outbound from the first network node that

responds to the inbound request is also directed to the intermediary node.
